NOTE FOR:

FROM:

SUBJECT: GE Bar Code Study

25X1

REFERENCE: A. Note for [redacted] dtd 19
Mar 87, Same Subject

B. Memo for Chief/IMSS from Chief/SD, dtd 26 Mar
87, Same Subject

1. Refs A and B are Supply Division's and my comments, concerns, and questions pertaining to the GE Bar Code Study. Overall, GE's recommendations are straight forward, logical, and should be pursued. As outlined in ref A, of primary concern is the developmental cost of software for interfacing between the LANS and the main frame computer.

2. Based on the data provided, the Telxon 701 and PTC 620 Bar Code Readers appear to be logical choices for an OL standard. However, there are numerous technical ramifications which must be considered and this decision should be based on recommendations from our technical experts in TG.
